

Davin Subash Nair

Subang Jaya, Selangor • davinsn00@gmail.com • +6012-208-6546 • github.com/davinsn • linkedin.com/in/davin-subashnair-a9bb10228/

Profile

Computer Science graduate specialising in artificial intelligence and full-stack systems, with experience building game AI, multimodal deep learning models, and scalable web applications. Proven ability to design end-to-end solutions, from data processing and model development to deployment and debugging. Strong focus on performance optimisation, system reliability, and real-world problem solving.

Skills

Java, Python, React.js, C, C#, C++, JavaScript, SQL • Spring Boot, Flask, Node.js • TensorFlow, Keras, Scikit-learn • HTML, CSS, Tailwind, MongoDB, MySQL • Git, Maven

Languages

English (Fluent) • Malay (Conversational)

Key Projects

Hone Built Business Intelligence Dashboard (Final Year Industry Project)

Flask, MongoDB, Chart.js, Xero API, Procore API, Python

- **Developed a full-stack business intelligence dashboard for Hone Built PTY LTD using Flask and MongoDB.**
- **Integrated Xero (OAuth2) and Procore APIs to automate real-time financial and project data reporting.**
- **Built automated data pipelines and Excel/OneDrive integrations to synchronise sustainability and operational data.**
- **Created interactive KPI dashboards and visualisations with Chart.js for finance, project performance, and sustainability metrics.**
- **Implemented authentication, role-based access control, and responsive UI for secure internal use.**

Game AI Systems

Python, AI, Reinforcement Learning

- **Developed AI systems using steering behaviours, finite state machines (FSMs), decision trees, Minimax, and reinforcement learning.**
- **Implemented real-time navigation, obstacle avoidance, and decision-making for multiple game environments.**
- **Built AI behaviours for the Frog Game and contributed to Connect4 Minimax and reinforcement learning optimisation.**
- **Designed unit tests to validate agent behaviour, collision detection, and AI decision logic.**

VetCare Appointment System

Spring Boot, Java, H2, SQL

- **Developed appointment management features using Spring Boot and MVC architecture.**
- **Integrated an H2 database with SQL migrations for reliable data persistence.**
- **Implemented authentication, booking validation, clinic selection, and time-slot management.**
- **Improved frontend usability and developed unit tests to enhance application reliability.**

Multimodal Visual Entailment Model

Python, TensorFlow, CNN, RNN

- **Developed a multimodal deep learning model combining CNN image features with RNN text representations.**
- **Built end-to-end preprocessing pipelines for image and text datasets.**
- **Applied K-Fold cross-validation and model evaluation to assess classification performance.**
- **Performed feature fusion and exploratory data analysis to improve model accuracy.**

Social Media & Network Analysis

Python, YouTube Data API v3, NLP

- **Developed two High Distinction projects analysing YouTube search data using the YouTube Data API v3.**
- **Performed sentiment analysis using VADER and TextBlob and topic modelling using LDA.**
- **Visualised trends and insights using statistical and network analysis techniques.**

Full Stack Organic Grocer Website

React, Node.js, MySQL

- **Developed a full-stack e-commerce platform using React, Node.js, and MySQL.**
- **Designed RESTful APIs, relational database schemas, and backend business logic.**
- **Implemented input validation, authentication, and error handling to improve system reliability.**

Experience

Internship: WIPData Sdn Bhd

Duration: Aug 2026 – Nov 2026

Description:

- Position: IT Internship
    - Developed an AI Usage Dashboard to monitor and track the company's AI usage across project tasks. The dashboard was subsequently integrated into the company's Malaysia Digital Economy Corporation (MDEC)-funded project.
    - Contributed to the development of Markaz, a centralised data observation and analytics platform for manufacturing companies, collaborating on backend architecture and PDF parsing technology to support the ingestion and processing of diverse document formats.
    - Supported backend development and API integration, working with services such as the Bank Negara Malaysia API and OpenRouter API to enable financial data retrieval and AI usage tracking.
    - Worked on multi-source data integration to support data ingestion from relational databases, IoT sensors, REST APIs, Excel and CSV files, and PDF, JSON, and XML documents.
    - Contributed to AI-powered data querying and visualisation capabilities, enabling users to retrieve insights from integrated data sources through a chatbot and explore data through visual dashboards.

Education

- Bachelor of Computer Science - RMIT University (2023–2026)
    - Minor: AI & Machine Learning
    - High Distinction in Multiple Projects
    - CGPA: 2.50
- AUSMAT - Sunway College Malaysia (2020-2021)
    - ATAR: 69.3
- Pearson Edexcel IGCSE O-Levels - Maz International School (2011-2020)
    - GRADE: 6 A* and 1 A
